

a first reproduction device to receive and reproduce image information recorded on one of the first memory and the second memory; and

a changer for selectively changing between a first condition, in which the first reproduction device and the first connection are placed in communication, and a second condition, in which the first reproduction device and the second connection are placed in communication.

41. A camera capable of supporting a first memory and a second memory, the camera comprising:

a camera body;

a first connection connectable to a first semiconductor memory capable of storing image information corresponding to at least two photographic frames;

a second connection connectable to a second semiconductor memory;

a reproduction device to reproduce image information stored on one of the first semiconductor memory and the second semiconductor memory; and

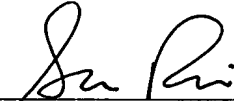

a changer to selectively change between a first condition, in which the reproduction device and the first connection are placed in communication, and a second condition, in which the reproduction device and the second connection are placed in communication.

REMARKS

This Preliminary Amendment cancels Claims 1-32 of this Application and adds Claims 33-41, wherein Claims 33, 38, 40, and 41 are independent.

Proposed amendments to FIGS. 10, 14A, 16B, 33, 43, and 44 are made in association with this Preliminary Amendment to correct minor errors therein. These proposed amendments are submitted herewith in accordance with 37 C.F.R. § 1.121(a)(3)(ii).

Respectfully submitted,

Steven P. Rhines
